

3. Local refinement: improvements and persistent failures

Separate experiment: 200 unique synthetic pairs · eight report patterns · 25 pairs per pattern

A Identifying digits exposed, by report pattern

Identifier split across lines	0/25	25/25	0/25
Identifier in a separated footer	0/25	25/25	0/25
Identifier inside parentheses	0/25	25/25	25/25
Modified identifier label	0/25	25/25	25/25
Linked specimen / addendum	0/25	0/25	0/25
Multirow table	0/25	0/25	0/25
Same digits different roles	0/25	0/25	0/25
Semicolon fields	0/25	0/25	0/25
	Institution-developed pipeline	Context-aware rules	Refined rules

B Preservation and overall performance

Zero tested-digit exposure alone does not imply success: the institution-developed pipeline preserved no complete molecular expressions. Refinement produced 50 additional successful pairs out of 200, across two report patterns (p = 0.50 accounting for patterns).
